

REVERSE LOGISTIC **IT ASSET SCHEDULING**

Security, speed and cost, in order of priority - are the prime considerations when developing your logistical procedures.

Xperien

IT ASSET SCHEDULING AND VERIFICATION

We understand the challenges and through our partnerships, we are able to offer 100% national network without sub-contracting any part of the collection process.

Digital Tracking

We maintain accurate information on all movements, from multi-facility to our warehouse operation. We increase speed through efficient barcode scanning, thereby reducing human error and incidents of loss.

Dynamic Disposal

If your ITAD policy is to be effective, warehousing must be kept to a minimum. By doing so, our workshop is able to process thousands of computers per month and reduce the potential of shortages.

Decommissioning

Best practice for decommissioning equipment is 'roll-in roll-out' a process that uses the same box in which the new equipment is delivered to collect the used equipment, this is usually a collaboration between maintenance and the ITAD service provider.

Security, speed and cost, in order of priority - are the prime considerations when developing your logistical procedures. For instance, we use digital tracking to improve security by eliminating human error. Our belief in less storage (warehousing) improves speed of delivery and we also reduce packaging cost by using boxes in which new equipment is delivered.

When your offices have national coverage, you will inevitably have remote locations that require service delivery. We will service them through a seamless branch network.

Chain of Custody

When hard drives are decommissioned, they have to go through a logistical process before they are eventually destroyed (offsite plant shredding). However, these processes may be vulnerable due to hard drives having residual value and are often stolen. You may choose to adopt a procedure for the most critical data, the risk is mitigated by employing the use of destroyData strongbox with nationwide service and onsite alternatives.

Site Assessments

We are able to avail our staff to do site assessments at your premises.
